Wainscoting - OXFORD
Color: white UNI

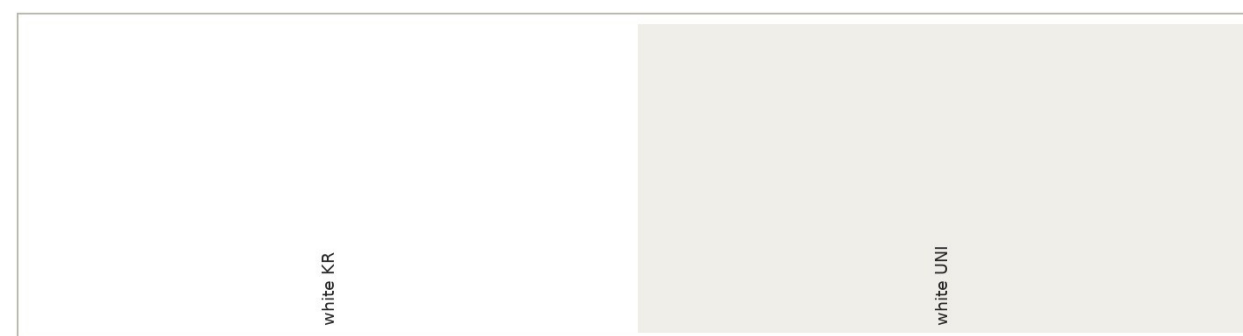

Subtlety, sophistication and style

English wall panelling is a symbol of elegance and timeless style that brings a unique character to any interior. It combines aesthetics with functionality, introducing warmth, harmony, and classic simplicity to the space. Rooted in the tradition of English residences for centuries, it now fits just as beautifully into modern interiors.

The classic system has only three parts: a decorative infill and two framing mouldings, for quick, straightforward installation. Geometric layouts pair with any colour — the panelling can even be painted to match your interior.

Application:

- enhancing interiors with a sense of prestige
- accentuating the elegance of classic furniture
- elevating hallways and staircases
- decorating doors and furniture surfaces
- creating independent wall elements
- concealing wall imperfections

Benefits of use:

- full colour customisation available
- versatile design possibilities
- quick and easy installation
- acoustic and thermal insulation
- durable and low-maintenance
- conceals wall imperfections

Technical details:

- top mouldings: Flexi, Morfeusz, Elegant, Greta, Aura
- infill panels: OXFORD, ELBY
- skirting boards: D2, D3, D8, D11, D16
- material: MDF, pre-impregnated foil
- colour: white KR / UNI, custom paint

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Lamela TRI - 20x40
Color: Forest

Style, precision and creativity

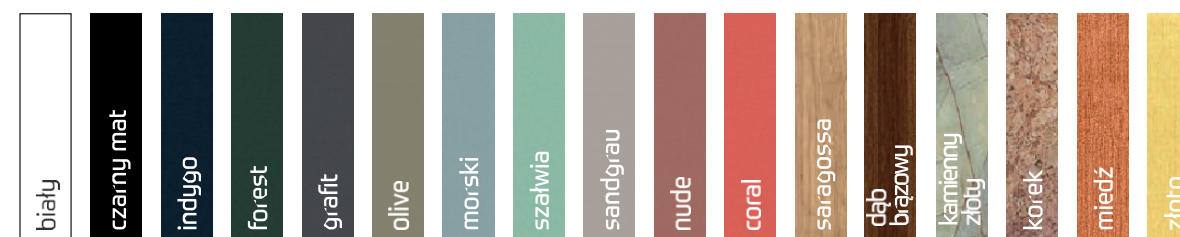

Lamellas are a versatile finishing element with rich decorative possibilities and a wide range of applications. Can be used in many different ways in interior design. They are elegant and practical, available in three cross-sectional shapes and many color variants, allowing for adaptation to various aesthetic preferences and visual concepts, giving the room a unique character. Do you want to decorate the wall impressively, give it depth and a new texture or hide its imperfections? Hide electrical cables or create an interesting frame for LED lighting? Or maybe you are more interested in an attractive transformation of the appearance of your furniture or doors?

These long strips made of solid MDF and laminated with pre-impregnated foil will allow you to implement many ideas. Mount them vertically, horizontally or diagonally. Choose their shape and color as you wish. Cut and glue freely to insulate and visually enlarge your interior or decorate its furnishings. Let your imagination run wild and easily implement your craziest ideas!

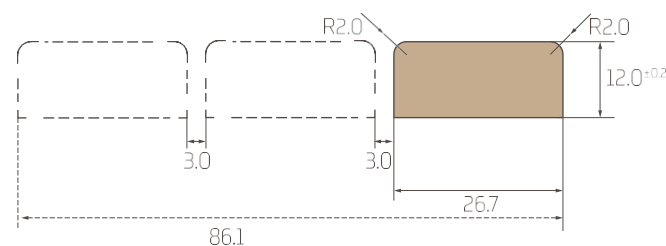

Application:

- walls and decorative backgrounds
- giving texture to flat surfaces
- increasing color contrast
- masking inequalities
- hiding wires and cables
- finishing of doors and furniture

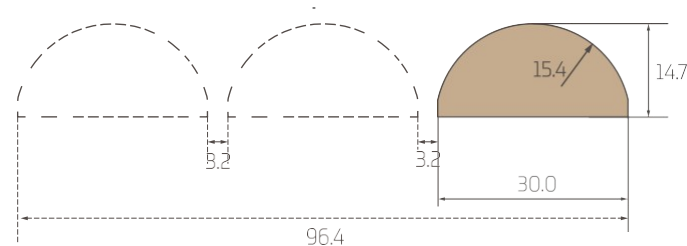

Available collors:

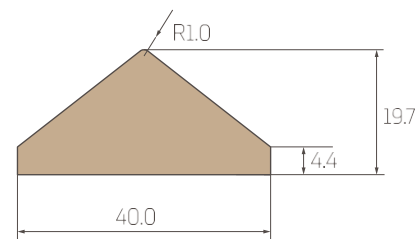

Lamela ■ 12x27

Lamela ▲ 15x30

Lamela ▲ 20x40

Benefits of use:

- decoration and visual appeal
- pleasant light dispersion
- possibility of strict personalization
- multifunctionality and practicality
- masking imperfections
- easy mount – diy possibility
- sound diffusion

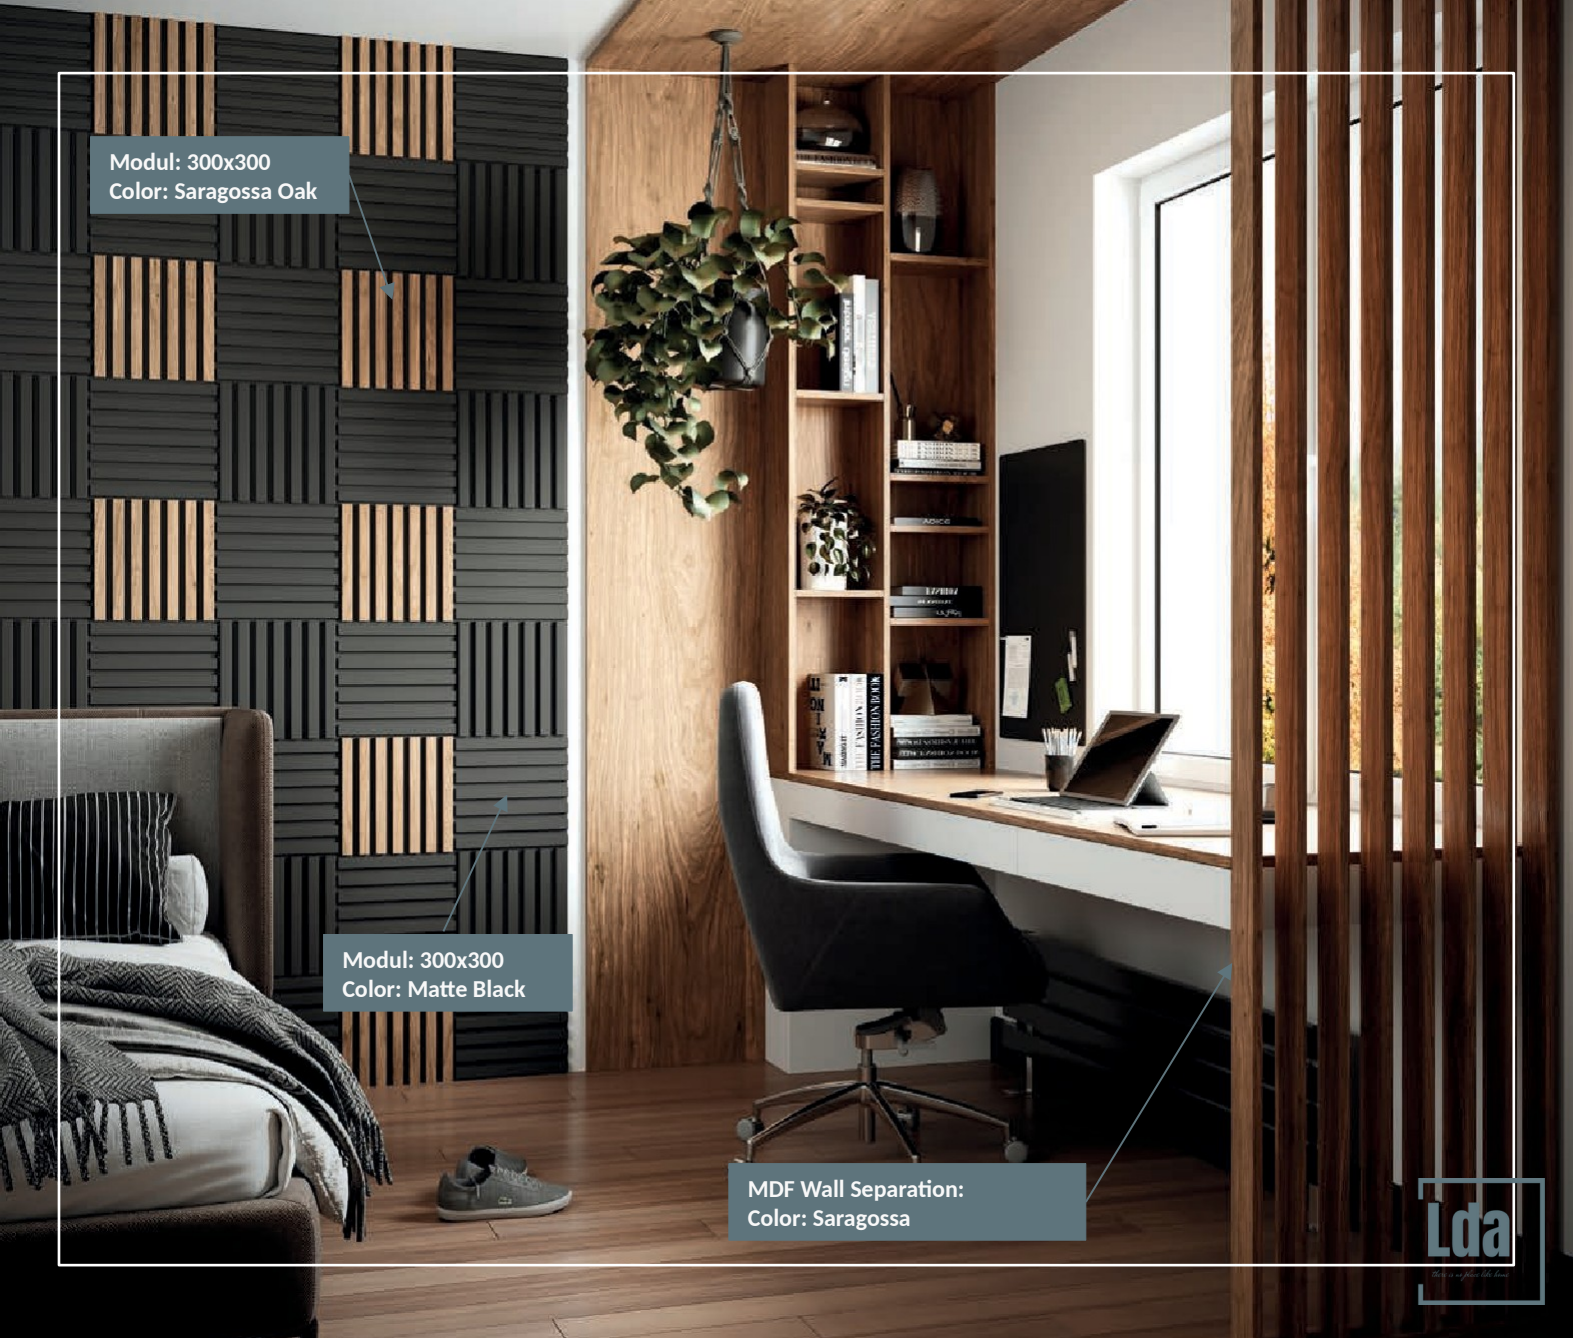

Technical details:

- slat length: 2600 mm
- other dimensions: 12x27; 15x30; 20x40
- coating: pre-impregnated foil
- spot: hot melted glue
- weight: 0.64 kg; 0.69 kg 0.97 kg
- packaging: foil sleeve
- ease of assembly

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Minimalism, perfection and comfort

Our 300x300 and 400x800 acoustic modules are easier to put together than many children's puzzles! You can decorate walls, furniture, doors and other surfaces in your apartment with them. It's only up to your imagination where they will be located and in what color configuration or orientation you will arrange them.

Due to its lightness and small dimensions, the product is both easy to transport and quickly mount on selected surfaces, creating unique compositions, giving old furniture a new shape or protecting selected places against contamination and damage.

The environmentally friendly felt backing of the modules has an additional function of improving acoustics, creating a more relaxed atmosphere and allows you to control sounds in residential and commercial spaces.

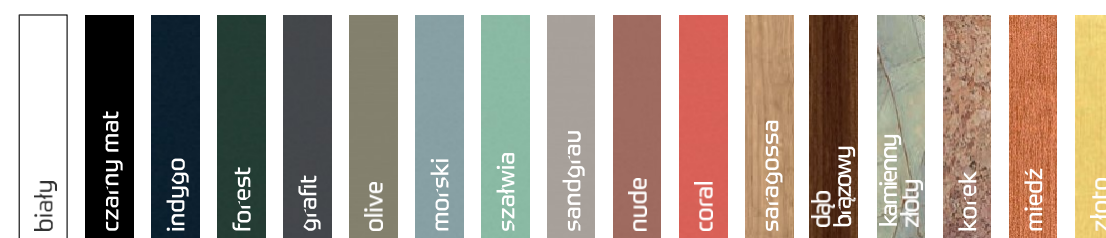

The modules therefore improve both the aesthetics and acoustics of rooms. It is worth experimenting with different colors and arrangements to create your own unique solutions.

Application:

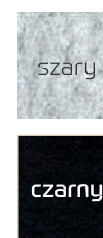

- decoration of residential interiors and public spaces
- improving acoustics and sound control
- decorating and renovating furniture fronts and doors
- modeling of desk tops and bed headboards
- protecting walls against damage and dirt

Suport

Benefits of use:

- convenience and ease of installation
- small dimensions
- improving acoustics and reducing noise
- eye-catching appearance
- creativity in design
- versatility and multifunctionality
- durability and easy maintenance

Technical details:

- module length: 300 mm
- module width: 300 mm
- material: MDF, felt
- coating: pre-impregnation foil
- binder: staples, hot melt glue
- weight: 0.62 kg
- packaging: heat-shrinkable foil

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Metamorphosis, freshness and creativity

Are you wondering how to easily and quickly change something in your environment? Give it a slightly original look, decorate it in an unusual way, refresh furniture fronts, cover the imperfections of adjacent walls or protect them from the intense joy of your pet that has just returned from an autumn walk?

There is a solution for this! **400x800 acoustic panels** are small decorative elements that are easy to transport and even easier to install on the selected surface.

The multitude of available colors and their proportional dimensions allow you to create wonderful compositions. They match each other both vertically and horizontally, and the cleverly designed felt margin prevents potential discrepancies that could occur when connecting the slats at the junction.

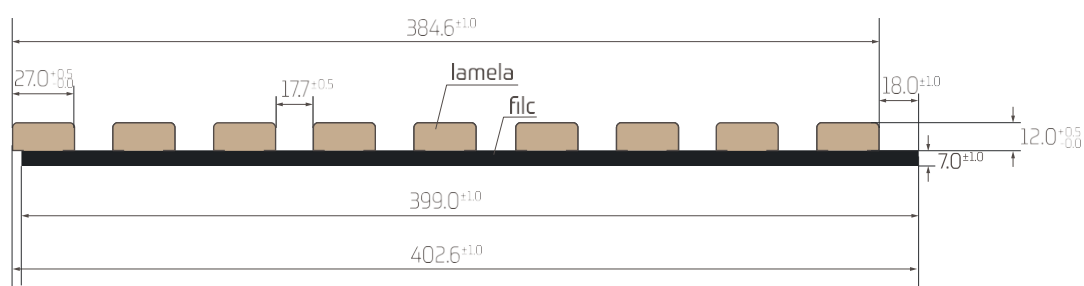

The offered finishing of the slats in the form of self-adhesive caps in the selected color, included with the product, is a comprehensive complementary solution that does not require any additional treatments to hide the ends of the slats in the color of raw MDF.

Application:

- decoration of residential interiors and public spaces
- improving acoustics and sound control
- decorating and renovating furniture fronts and doors
- modeling of desk tops and bed headboards
- protecting walls against damage and dirt

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Beauty, simplicity and functionality

The space you live in every day deserves not only reliable functionality, but also an interesting arrangement and a unique appearance.

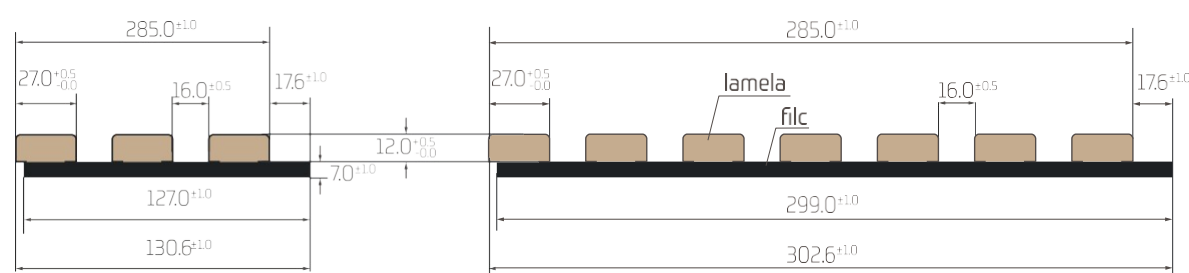

Sometimes, very little is needed to make an average interior more expressive, beautiful and unique.

Felt lamella panels are a unique solution that combines usability and aesthetics, enabling the arrangement of unique interiors and ensuring better acoustics. They are easy to adapt to various needs and styles, and the variety of compositions and arrangements is limited only by human imagination. A wide range of available colors further expands the decorative possibilities.

Equally important are the simplicity of their installation, durability and ecological properties. Choosing this combination: slats made of solid MDF board, placed on high quality felt made of recycled materials, means that you have a real impact on the environment and support ecology.

Application:

- decoration of residential interiors and public spaces (both walls and ceilings)
- protecting walls against damage and dirt
- hiding the curvatures of angles of adjacent surfaces
- optical extension of interior design elements improving acoustics and sound control

Acoustic panel : 2600x400x19 (9 lamelas)

Softness, gentleness and elegance

These semicircular slat panels are a modern evolution of our classic acoustic designs, offering the same benefits and specifications as their rectangular predecessors — but their rounded shape helps visually soften interior spaces, adding a touch of lightness and elegance.

Available in 17 colour options on a black or grey felt base. Slightly wider than previous models, they keep all key advantages: enhanced acoustics, easy installation, lasting durability, and eco-friendliness.

Application:

- interior decoration, walls and ceilings
- wall protection against damage and dirt
- concealing curved wall transitions
- visually elongating interior elements
- enhancing acoustics and sound control
- softening the visual geometry of a room

Benefits of use:

- convenience and ease of installation
- improved acoustics and noise reduction
- attractive appearance
- supports flexible interior design
- multifunctional and adaptable
- durable and easy to clean

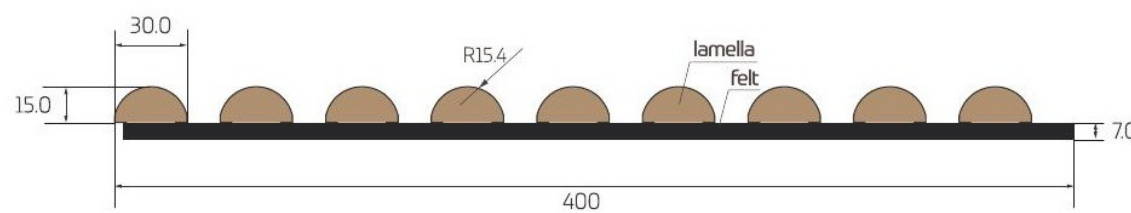

Technical details:

- length: 2600 mm
- width: 400 mm, 9 lamellas
- coverage area: 1.04 m²
- material: MDF, felt
- coating: pre-impregnated foil
- weight: 7.2 kg
- packaging: shrink wrap

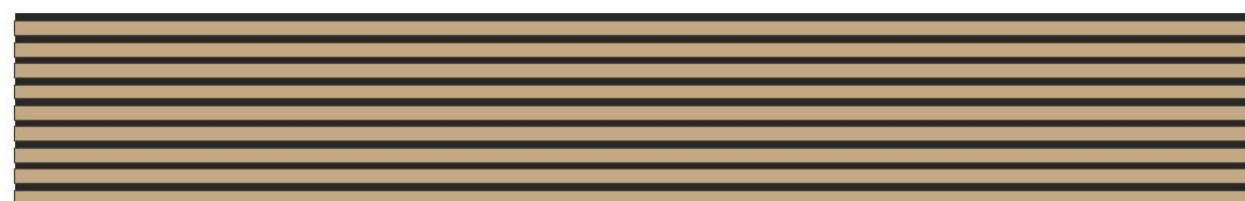

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Classics, intimacy and alternative

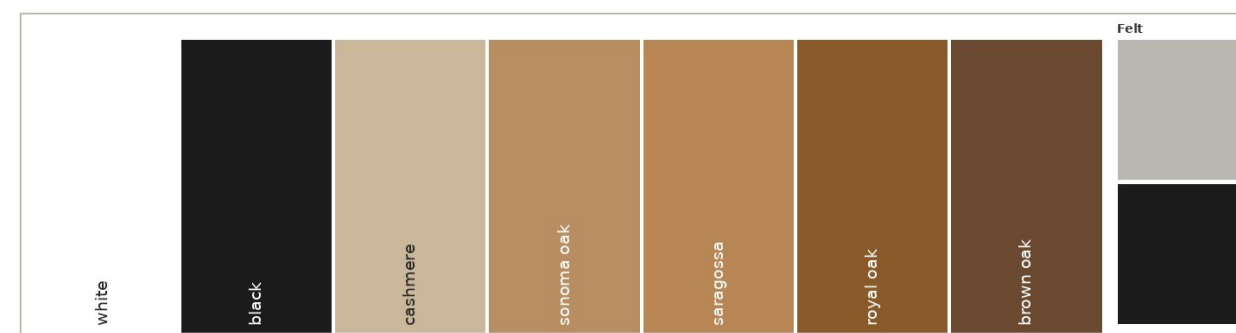

Classic wainscoting is making a comeback and becoming fashionable again. Today's abundance of layouts, colour schemes, and the flexibility to combine them with metal, glass or concrete let interiors instantly gain a stylish, unique character.

Keeping up with the times, we've created acoustic panels as an excellent alternative to traditional wainscoting.

Available in five colour variants, easy to install and highly durable — improving room acoustics while adding a warm atmosphere.

Application:

- interior decoration, walls and ceilings
- protecting walls from damage and soiling
- visually elongating interior elements
- improved acoustics and sound control

Benefits of use:

- quick and easy installation
- improved acoustics and noise reduction
- elegant, modern appearance
- creative design flexibility
- multifunctional and versatile use
- durable and easy to maintain

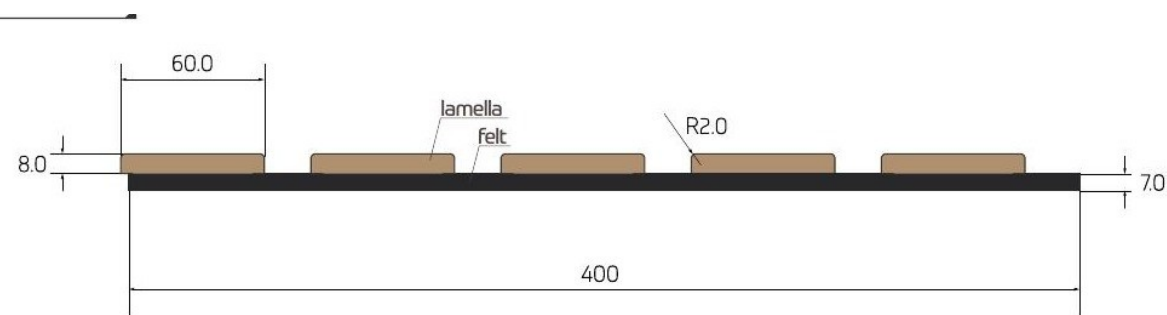

Technical details:

- length: 2600 mm
- width: 400 mm, 5 flat lamellas
- coverage area: 1.04 m²
- material: MDF, felt
- coating: pre-impregnated foil
- weight: 6.1 kg
- packaging: shrink wrap

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Mood, intimacy and expressiveness

Functional development of a small living space can be quite a challenge. Especially if you share it with other household members and you start to lack even a bit of privacy. When there is not much space to build traditional walls or it is uneconomical, and you really want not to limit the flow of natural light, openwork spatial walls come to the rescue.

Quick and simple installation of such a wall in the apartment opens up many possibilities: it can divide the space into functional zones, separate them from each other, thus ensuring more intimacy, allow for maximum use of space, enhance the aesthetics of the entire interior or completely visually rearrange it. Come on.

This is a versatile solution that can be adapted to individual needs and preferences, creating a unique and eye-pleasing design, and will also work well in large-format interiors. In addition to its basic functions, it also plays a decorative role and is a way to diffuse light in a more interesting way.

Application:

- surface division and space decoration
- adaptation of surfaces to meet the needs of changing interior functions
- separation of additional functional zones
- organizing an optically closed area
- quick rearrangement of rooms
- building window coverings and balustrades

Benefits of use:

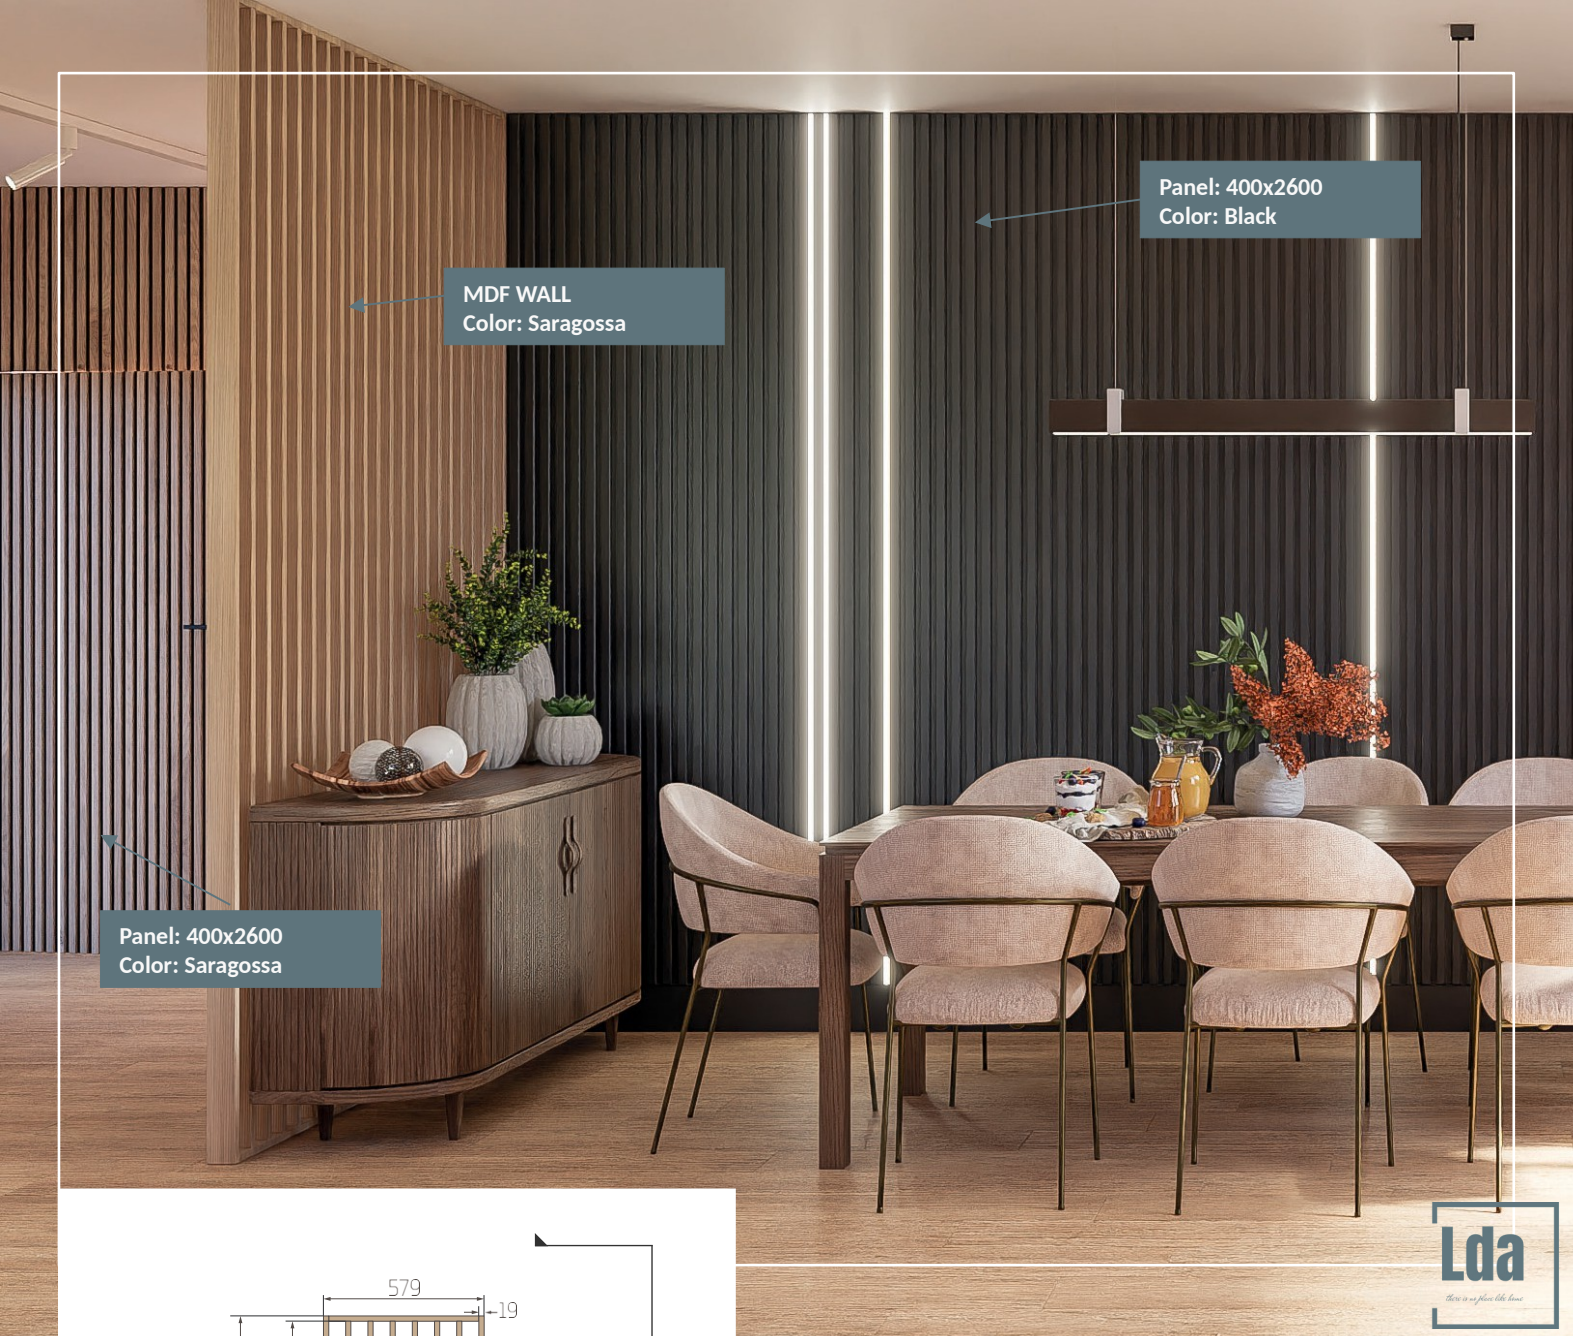

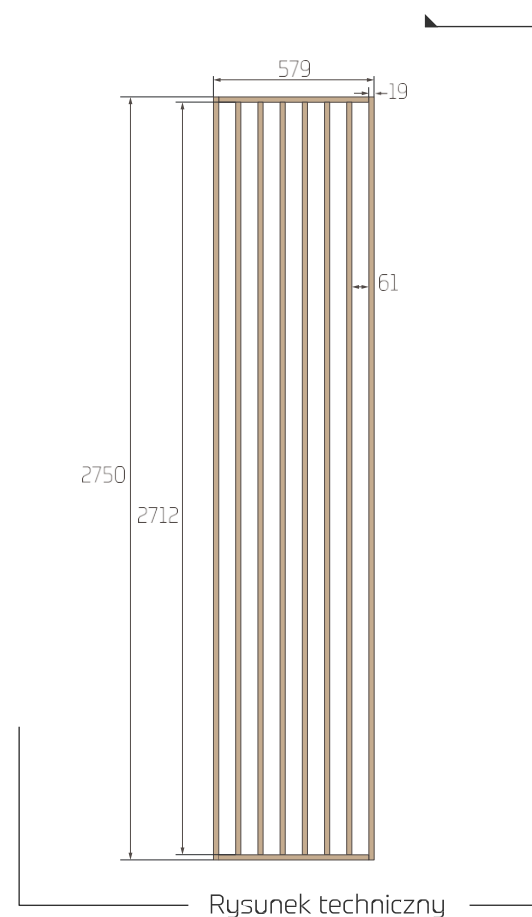

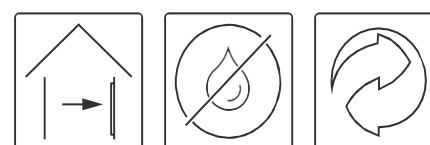

- possibility of separating space and separating rooms
- a way to save space ensuring intimacy and privacy
- flexibility in assembly
- visual aesthetics
- favorable light dispersion
- easy to keep clean

Technical details:

- wall width: 580 mm
- height: 2750 mm
- depth: 65 mm
- material: MDF
- coating: pre-impregnation foil
- binder: hot melt glue
- weight: 21.5 kg
- packaging: cardboard

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Handiness, suitability and privacy

Openwork spatial walls adapt office or residential interiors, creating functional areas with increased privacy without blocking natural light. Rotating blinds built into the spatial wall give full control over lighting and privacy, swiftly adjusted to individual needs.

Blinds don't have to be only horizontal — vertical mechanisms are just as appealing. Modules fit together for wall heights of 1.25 m or 2.5 m, any width, paired with a matching decorative shelving module.

Application:

- space division and decorative enhancement
- adapting interiors for flexible functions
- defining functional zones
- creating visually enclosed areas
- rapid interior reconfiguration
- window barriers and balustrades

Benefits of use:

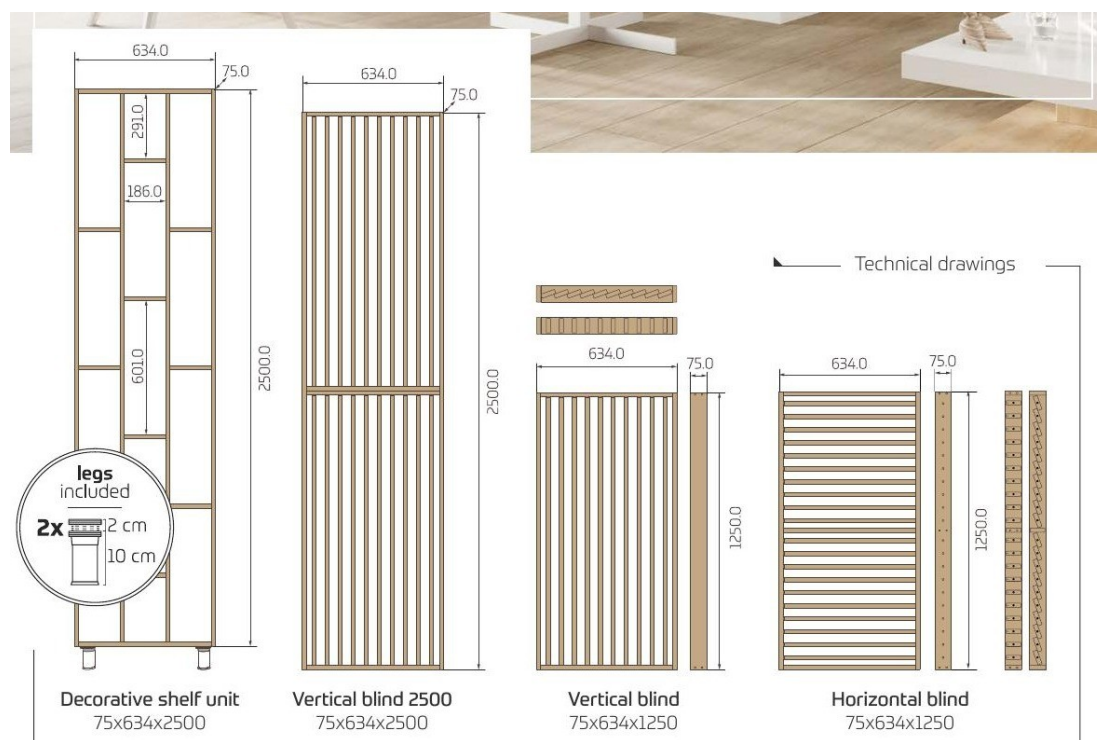

- a way to save space
- control view and light with adjustable blinds
- modules connect to each other
- providing intimacy and privacy
- full installation flexibility
- easy to keep clean

Technical details:

- width: 634 mm, thickness: 75 mm
- shelf unit / vert. blind: 2500 mm
- horiz. / vert. blind: 1250 mm
- material: MDF, pre-impregnated foil
- weight: shelf unit 15.0 kg
- weight: blinds 15.6–31.2 kg

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Design your perfect shelf unit!

Modular decorative shelves are designed specifically for our Decorative Shelf Unit, adding function and an attractive appearance. Buy them separately, choose from a variety of colors, and clip them exactly where you want on the crossbars of the unit.

Your new shelf unit will never be boring! Create a unique composition tailored to your needs — a functional, stylish solution for years to come.

Application:

- additional color combinations
- customizing the shelf unit's appearance
- turn it into a plant stand or photo display

Benefits of use:

- flexible – rearrange and adapt the shelves
- wide range of colors to choose from
- no drilling – clip onto any crossbar
- minimalist, modern design
- durable color-through MDF

Technical details:

- shelf dimensions: 223x255 mm
- thickness: 8 mm
- material: black MDF
- coating: pre-impregnated foil
- weight: BOX 0.36 / OVELO 0.30 kg
- max. load: 1 kg / shelf

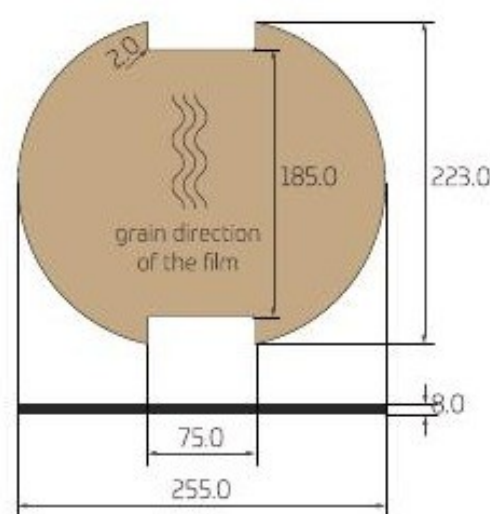

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

Skirting board D9
Color: white

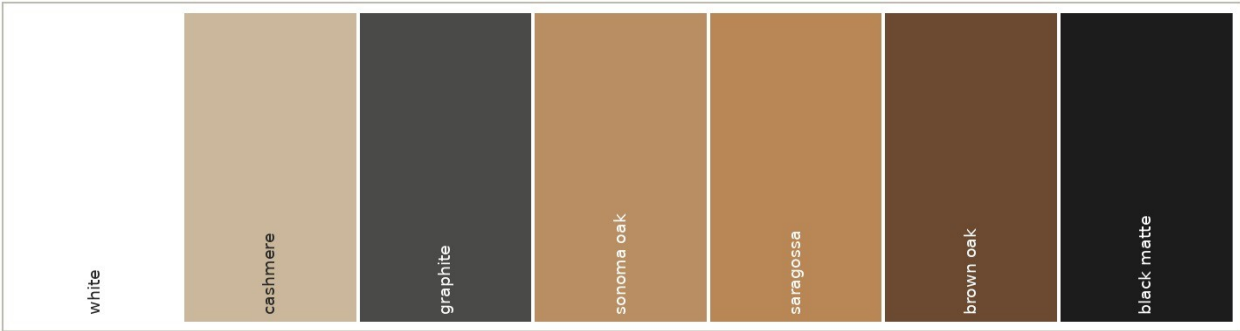

Elegance, practicality and usability

Skirting boards protect the junction between floor and wall or other surfaces such as stairs or doors, but above all they add character to interiors — combining practical protection with decorative appeal. Some also hide electrical cables or provide lighting (D7 LED).

The choice of moulding depends on the room and should match other finishes for a cohesive look. With profiles D2 to D18, RK1, RK2, C1, EURO, LS38, LS60 and BP60, there's a shape for every project.

Application:

- finishing of floor/wall joints
- masking irregularities in the floor
- protection of walls against damage
- increase in color contrast
- concealing wires and cables
- finish for stairs or door frames

Benefits of use:

- attractive appearance and style
- protective function
- concealing wires and cables
- optically elevating rooms
- easy to install
- self-adhesive caps (D3, D8)

Technical details:

- thickness: 12–15 mm (EURO: 12.5 mm)
- length: 2000–2600 mm
- height: 40–150 mm
- profiles: D2–D18, RK1, RK2, C1, EURO
- material: MDF, pre-impregnated foil
- weight: 0.60–4.00 kg

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.

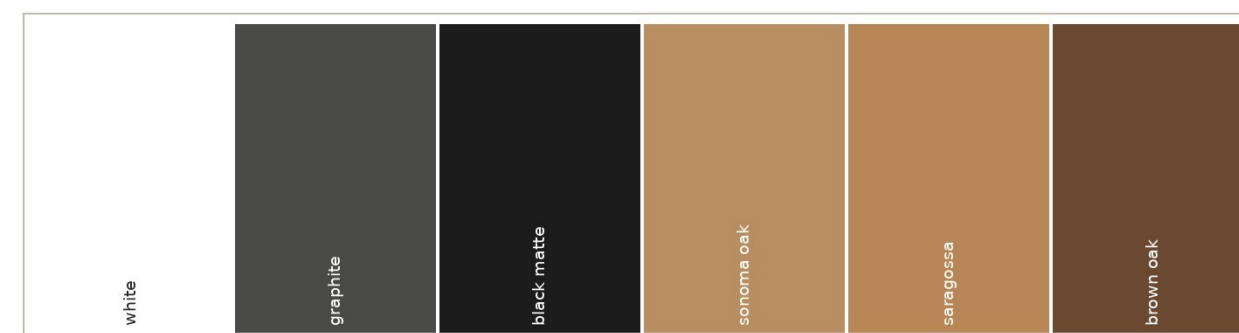

Charm, astuteness and camouflage

An angle cover strip elegantly and safely conceals electrical, plumbing and other installations. Dedicated corner elements handle right-angle transitions. The D3 strip is classic and minimalist, while D8 offers a more refined, grooved profile.

Durable MDF laminated with a white pre-impregnated film, with trim-compatible corners for easy installation. Completed by matching bands (8x60) and angle profiles (22x22x2600) for other masking needs.

Application:

- concealing electrical and plumbing runs
- masking door tracks and curtain rails
- masking irregularities, protecting edges
- finishing of floor/wall joints
- enhancing visual contrast

Benefits of use:

- concealing imperfections
- visual aesthetics
- damage protection
- easy access to installations
- quick, intuitive installation

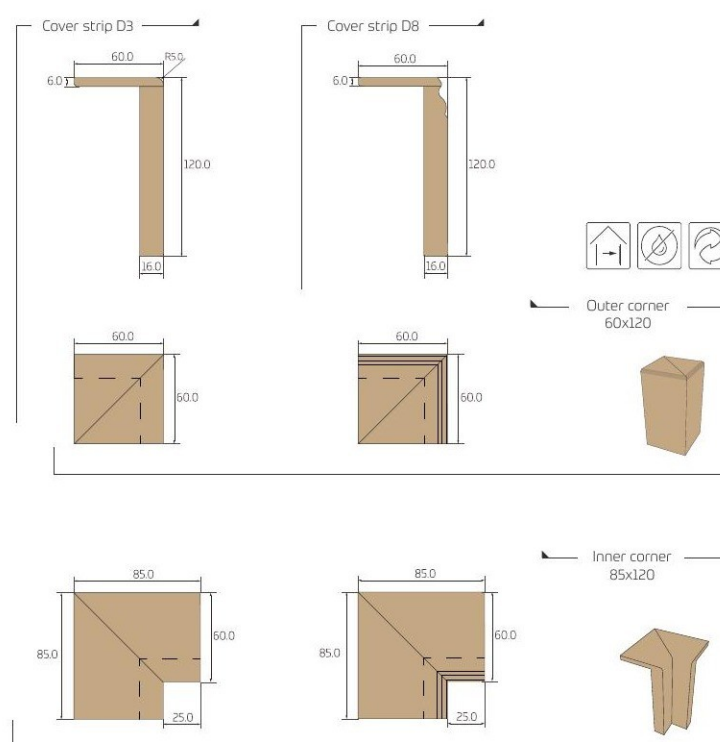

Technical details:

- cover strip: 2400 mm long
- cover strip: 120 x 60 mm
- outer corner: 120 x 60 mm
- inner corner: 120 x 85 mm
- material: MDF, white foil
- also: bands 8x60, angles 22x22

The product should be protected against moisture, it is suitable for indoor installation only, it can only be stored in dry and closed places in a horizontal position, away from heat sources, at temperatures up to 50°C, with a humidity of max. 60%.
